

# B&T GL-06® Less Lethal Launcher

B&T has developed what many in the industry feel is the solution to many of the problems faced by professional users the world over. This is how to deliver effective and accurate impact munitions to subjects at ranges beyond rock

and bottle throwing distances. This launcher will enhance the public order mission success in all environments to include night riots. Most other launchers on the market were designed to fire HE (High Explosive) rounds, which are area weapons. The B&T system is optimized as a system from the very beginning to be the most precious and accurate launcher on the market.

## B&T GL-06® is loaded with exclusive features that no other launcher has:

- Folding stock making it the most compact 40mm launcher on the market
- Integrated MIL-SPEC M1913 Picatinny Rail on length of barrel
- Accessory rails on the 3 o'clock, 6 o'clock and 9 o'clock position
- Protected front and rear sights
- Weighs just 2000 grams
